(1) Rated power of the module at STC will not exceed the optimizer Rated Input DC Power. Modules with up to +5% power tolerance are allowed.

(2) For other connector types please contact SolarEdge.

(3) For dual version for parallel connection of two modules use the P485. In the case of an odd number of PV modules in one string, installing one P485 dual version power optimizer connected to one PV module is supported. When connecting a single module, seal the unused input connectors using the supplied pair of seals.

(4) For ambient temperatures above +70°C / +158°F power de-rating is applied. Refer to Power Optimizers [Temperature De-Rating Technical Note](#) for more details.

(5) It is not allowed to mix P404/P485/P505/P601 with P370/P401/P500 in one string.

(6) If the inverters rated AC power ≤ maximum nominal power per string, then the maximum power per string will be able to reach up to the inverters maximum input DC power Refer to the [Single String Design Guidelines Application Note](#) for more details.

(7) For the 230/400V grid, it is allowed to install up to 13,500W per string when the maximum power difference between each string is 2,000W.

(8) For the 277/480V grid, it is allowed to install up to 15,000W per string when the maximum power difference between each string is 2,000W.
